

## BRAMA XS CONTROLLER FOR MULTITENANCY

Brama XS Controller is IT security solution that can actually increase the values of using of multi tenancy and resources pooling. It offers better protection for resources and more efficient access control not only for large regular business centers but also smaller office spaces used for coworking.

BRAMA XS minimize network administrative activities in exchange for high level of Authentication, Authorization and Accounting services everywhere where large number of users work on different devices, need access for different data bases but are connected to one network and infrastructure.

BRAMA XS integrates with ease to existing infrastructure and brings in immediate protection benefits such as log and audit access to confidential networks and systems not only for each single individual but also each single individual device.
