

The BRAMA XS Controller provides authentication, authorization, and accounting services for IT infrastructures. Brama XS Controller manages and controls remote and local user access through Network Access Servers (NAS) for wireless and wired networks or a combination thereof.

The BRAMA XS Controller works with existing enterprise network equipment from a wide variety of vendors by using RADIUS services. In addition, its TACACS+ services provide authorization services for managing network access equipment. In short, the BRAMA XS Controller integrates easily within existing infrastructures, enables smooth adaptation to your specific network requirements and provides a quick increase in your network security levels.

BRAMA XS CONTROLLER KEY FEATURES
